[Important matter]

Configuration Advice

You have to configure the SBCs SIP Trunk settings If you have a SIP trunk connection need between PBX and ITSP (Internet Telephony Service Provider).

As necessary, refer the additional volume of "Setup Guide for Media5 SBC and NS1000 Ver2 WAN Scenario Ver1.0"."

1. Introduction

[Note]

The SIP remote extension(s) are registered to the V-UTEXT32 of NS1000 (Ver.2), it's not the registration of V-SIPEXT32. We can register the UT-SIP extension as V-UTEXT32 through the SBC by NS1000 Ver2. This Setup Reference Guide describes mainly using the V-UTEXT32.

Objective:

A Session Border Controller is required to supplement existing IP-PBX functionality. It will provide the means of establishing a simple remote office connection

(Allowing the use of remote SIP extensions of the IP-PBX without the need for a PPTP, IPSEC, GRE or Hosted VPN Solution). **** Please Note: HTTPS/SSL is VPN Technology ****

This Setup Reference Guide describes the configuration to interconnect between the Panasonic IP-PBX (KX-NS1000 Version2 series), the Media5 Session Border Controller (Mediatrix501 series SBC), and remote SIP Extensions (Panasonic KX-UT series).

The items above are interconnected using SIP, TR069 (CWMP) and NTP protocol. The global IP address (also known as public IP address) of the main office is used to interconnect them.

Results (confirmed operation):

1-1 Receiving and making a Call

Calls between extensions are possible. The Caller ID (internal phone number) is displayed on the LCD screen of Panasonic UT-SIP Extension and SIP Extension.

Incoming calls from PBX trunk lines also display the Caller ID (according to system settings).

1-2 Conversation with G.722, G.711 and G.729

Use of the above codec is possible, providing PBX settings allow this. (e.g. KX-NS1000 (V-UTEXT) settings)

1-3 Placing a call on-hold and retrieving a Call that is on-hold These features are confirmed by KX-NS1000 control.

1-4 Transferring Call

The transferring of a Call to another destination is confirmed by KX-NS1000 control.

1-5 Call forwarding (V-UTEXT32 Registered)

These features are confirmed by KX-NS1000 control.

* Note* This feature does not work as using registration of SIP extension(V-SIPEXT32).

Restriction on the use of standard SIP Extension (V-SIPEXT32).

Attention: The content of this document is made up by verification results. It is no guarantee.

2. Approach to Interconnection

- (1) For the Panasonic IP-PBX, the Virtual UT SIP Extension (V-UTEXT32) is used to interconnect the IP-PBX to a remote UT SIP extension (remote office) via the SBC. The SBC is installed as the main router in the head office. For this setting of the SBC, WAN and LAN (ET1) interface are used. All SIP traffic between the IP-PBX and the internet is routed through the Mediatrix SBC. The SBC is set-up a DHCP server and also as a NAT device.
- (2) The SBC operates to ensure correct interconnection between the IP-PBXs V-UTEXT32 virtual circuit card and the Remote office UT SIP Extension.

The SBC provides the following functions:

- Remote office UT SIP and SIP extensions address resolution and address translation within SIP messages.
- Head office (any PBX extension) and the remote office (UT SIP Extensions) can be seamlessly connected by the use of an IP-PBX UT SIP extension.
- Little or no dependence on the setting of the Router of the Remote-Office.
- (3) We recommend that you consider the bandwidth of Internet access in each country, to change the priority of voice Codec G.729 the remote side.
- (4) We recommended that you will be use the Port number 5060 of receiving of SIP in SBC. The SBC is likely to have some interoperability issues when using different SIP port of this. The SBC will check all SIP messages and modify them even if as use the SIP Trunk in the PBX. It means the SBC receiving Port Number is "5060" for SIP-Extension and also SIP Trunk. Therefore we strongly recommend that you set-up the port number 5060 of SBC, due to the specification of the Media5 SBC.
- (5) About Interoperate with Remote SIP Extension and SIP Trunk connection for ITSP.
 You have to configure the SBCs SIP Trunk settings if you have a SIP trunk connection need between PBX and ITSP (Internet Telephony Service Provider).
 As necessary, refer the additional volume of Setup Reference Guide for KX-NS1000 to SBC SIP Trunking.
- (6) The NS1000 has protocol HTTPS and HTTP for UT-SIP Phone registration. The NS1000 can support up to 20 remote extensions at the same time when using the HTTPS protocol.
 The protocol.

The protocol is described the HTTPS type as example in this Setup Reference Guide.

3. System configuration example

3.1 Diagram of system configuration example

3.2 Settings:

This section describes the network address scheme. Refer to later sections regarding entry of these and other settings.

Item	Configuration example	Description
PPPoE	10.0.0.1	Mandatory (Information offered by provider)
Fixed WAN IP address	(change to global address)	*Need to the External IP of SBC settings
Username	test-user@provider.com	Mandatory (Information offered by provider)
Password	abc123	Mandatory (Information offered by provider)
LAN nterface1:IP address	192.168.0.254	SBC LAN fixed-IP address
LAN interface 1: Netmask	255.255.255.0	Subnet mask
Receiving SIP port	5060	SIP port used
Used RTP port	35000 - 35999	Use for RTP streams.
Primary DNS	172.16.255.1	Mandatory (Information offered by provider)
DHCP IP Range from To	192.168.0.2 - 50	SBC's DHCP Server: Enable

3.2-1 SBC - Contents of Main Network Settings (Example)

3.2-2 SBC - Contents of Port Redirection (also known the Port forwarding) Settings (Example)

Protocol	Port number	Destination	Description
CWMP(HTTP)	7547	192.168.0.101	Send CWMP to PBX
	(TCP)		(PBX LAN IP address)
CWMP(HTTPS)	37547	192.168.0.101	Send CWMP to PBX
	(TCP)		(PBX LAN IP address)
SIP-MLT Data	7580	192.168.0.101	Send Data to PBX
Download(HTTP)	(TCP)		(PBX LAN IP address)
SIP-MLT Data	37580	192.168.0.101	Send Data to PBX
Download(HTTPS)	(TCP)		(PBX LAN IP address)
NTP	123	192.168.0.101	Send NTP to PBX
	(UDP)		(PBX LAN IP address)

3.2-3 IP-PBX (NS1000) - Contents of Main Network Settings (Example)

PBXs IP Address/Ports Settings

Item	Configuration example	Description
PBX MPR IP address	192.168.0.101	Example only (Fixed IP)
PBX DSP IP address	192.168.0.102 - 105	Example only (Fixed IP)
Net Mask	255.255.255.0	Example only
Gateway	192.168.0.254	SBC LAN IP address
DNS Settings	172.16.255.1	Information offered by provider
(Preferred DNS IP Address)	or 192.168.0.254 (SBC LAN)	or SBC LAN IP address
PBX DHCP Server Feature		If required
Starting IP address	192.168.0.51	Note) Set the different IP range
Ending IP address	192.168.0.100	from SBC's DHCP IP range.

3.2-4 IP-PBX (NS1000) - Confirmation of current each [Port Number] on Site Property (Example)

Port Number Item	Configuration example	Description
UDP Port No. for SIP Extension	5060	Default (SIP Port Number)
Server		
CWMP (HTTP) Port No. for	7547	Default
SIP-MLT		
CWMP (HTTPS) Port No. for	37547	Default
SIP-MLT		
Data Transmission Protocol	7580	Default
(HTTP) Port No. for SIP-MLT		
Data Transmission Protocol	37580	Default
(HTTPS) Port No. for SIP-MLT		

3.2-5 IP-PBX (NS1000) - Configure the SIP Extension parameter on Site Property (Example)

SIP Extension Item	Configuration example	Description
NAT - CWMP Server IP	10.0.0.1	Default: empty
Address	(Change to Global IP)	(Set PPPoE Fixed IP address)
NAT - CWMP Server (HTTP)	7547	Default
Port No.		
NAT - CWMP Server (HTTPS)	37547	Default
Port No.		
NAT - SIP-MLT Data Download	7580	Default
Server (HTTP) Port No.		
NAT - SIP-MLT Data Download	37580	Default
Server (HTTPS) Port No.		
NAT - SIP Proxy Server IP	10.0.0.1	Default: empty
Address	(Change to Global IP)	(Set PPPoE Fixed IP address))
NAT - SIP Proxy Server Port	5060	Default:15060
No.		Recommended changes
NAT - NTP Server IP Address	10.0.0.1	Default: empty
		(Set PPPoE Fixed IP address)
NAT - NTP Server Port No.	123	Default
NAT - Keep Alive Packet Type	Blank UDP	Default
		You can select REGISTER
		Or None
NAT - Keep Alive Packet	20	Default: 20 (sec)
Sending Interval Time (s)		*Note 1
NAT - SIP Register Expire Time	20	Keep Alive Packet Type:
(s)		REGISTER only

*Note 1: This interval must be shorter than the NAT binding time of the router. The default value is appropriate in most cases.

3.2-6 IP-PBX (NS1000) - Configure the Options of Recommended P2P Group (E	Example)
---	----------

System options P2P Group (2.9-Option 7)	Configuration example	Description
Priority Voice 1	G729	Default: G729
Priority Voice 2	G711	Default: G711
Priority Voice 3	None	Default: G722

3.2-7 IP-PBX (NS1000) - Configure the Group of P2P (Example)

P2P Group (3.10)	Configuration example	Description
P2P Group	1	Default
P2P Group Name	Empty	Default: Empty
Bandwidth Control	Disable	Default: Disable
P2P Group	2	Default
P2P Group Name	Remote Office	Example
Bandwidth Control	Enable	Default: Disable

3.2-8 IP-PBX (NS1000) - Contents of Remote UT Extension (SIP-MLT) Settings (Example)

ltem	Configuration example	Description
[Port Property Main]		
SIP Extension Number	301	Example
Password	1234	Default

	3rd:G722Mu / *4th: G722	3rd:G722Mu / *4th: G729A
[Remote Place tab]		
Phone Location	Remote	Default: Local
Protocol for Remote SIP-MLT	HTTPs	Default: HTTP
[Port Property Main]		
SIP Extension Number	302	Example(If required)
Password	1234	Default
P2P Group	2	Default:1
[Option tab]		
Codec Priority	*1st: G729A / 2nd:G711A/	*1st: G722 / 2nd:G711A/
	3rd:G722Mu / *4th: G722	3rd:G722Mu / *4th: G729A
[Remote Place tab]		
Phone Location	Remote	Default: Local
Protocol for Remote SIP-MLT	HTTPs	Default: HTTP

3.2-9 Maintenance PC - Contents of Network Settings example

Item	Configuration example	Description
Maintenance PC IP address	192.168.0.200	(DHCP or fixed ; For fixed, confirm
	(Example)	usable IP address first)
Subnet Mask	255.255.255.0	Example
Gateway		Unused (in Fixed IP)
DNS		Unused (in Fixed IP)

3.2-10 Remote Office UT Extension - Contents of automatically downloaded settings via TR069.

(Example) * Note1: Unless specifically instructed to do so, please do not directly configure the UT-SIP Phone via the web as this will interfere with the configuration settings delivered by the PBX.

Item	Configuration example	Description
UT SIP Phone: IP address	DHCP(Example, 192.168.10.1)	
UT SIP Phone: Netmask	DHCP(Example, 255.255.255.0)	
UT SIP Phone: Gateway	DHCP(Example, 192.168.10.254)	
Registrar Server Address	10.0.0.1	(Set Head office WAN address of
	(Change to global IP address)	assigned to the SBC.)
Registrar Server Port	5060	SBC SIP receiving port
Proxy Server Address	10.0.0.1	(Set Head office WAN address of
	(Change to global IP address)	assigned to the SBC.)
Proxy Server Port	5060	SBC SIP receiving port
SIP Service Domain	192.168.0.101:5060	Example
		PBX SIP Server Domain
		Need to add a :port number
SIP source port	25060	Source port for outgoing SIP
		* Measures for SIP ALG
		function in Remote router.
NAT Identity Keep Alive Interval	20 (second)	Example (Default: 20)
NAT Identity Supports Rport	Yes	Example (Default: Yes)
SIP extension Number	301	Example
Password	pass301	
SIP extension Number	302	Example (if required)
Password	pass302	

3.2-11 Remote Office Existing Router - Contents of main network settings

Item	Configuration example	Description
WAN global IP address	Fixed IP or It will provide different IP	Existing remote office router
	address from ISP every time.	WAN IP address.
LAN IP address	192.168.10.254	Existing remote office router
		LAN IP address

3.2-12 Remote office router contents of port forward settings

It is not necessary to change any settings of the Router of the remote office when using a SIP phone with "Keep-Alive" capability. (e.g.) Panasonic KX-UT series SIP Phones.

UT series SIP Phones can send the Keep Alive messages to the SBC (Blank UDP packets).

5. Procedure for Installing Remote SIP Phone (Remote V-UTEXT32).

There are 2 methods to install UT-SIP Phones (V-UTEXT32) at same local site as PBX and at remote site.

[Method 1]

Connect the UT-SIP Phone to the PBX, register the UT-SIP Phone to the PBX, and then configure remote V-UTEXT32 settings using Web Maintenance Console.

[Method 2]

Configure the UT-SIP Phone remote settings using the Web user interface of the UT-SIP Phone. You do not have to connect the UT-SIP Phone to the PBX when using this method.

* Note)

1. A KX-NS1000 can work with only one SBC. Also, multiple sites can share an SBC.

2. KX-UT series SIP Phones can communicate over a NAT (Network Address Translation)-enabled network only when communicating via an SBC from the KX-NS1000 to which the KX-UT series SIP Phones are registered.

3. When an SBC is in use, packets from P2P communication also go through the SBC. Therefore, the number of maximum calls is limited according to the maximum number of calls of the SBC.

4. When installing KX-UT series SIP Phones at a remote site where the time zone is different, those KX-UT series SIP Phones will not match the Daylight Saving Time, and Time Display of the remote site. The KX-UT series SIP Phones will act according to the time setting of the KX-NS1000 to which the SIP Phones are registered.

However, if the KX-UT series SIP Phones are registered to a V-SIPEXT card and if an NTP server is specified by the SIP Phone, the Daylight Saving Time and Time Display match the KX-UT series SIP Phone setting.

5.1 Procedure for Method 1 with KX-UT Series SIP Phones.

Configure the V-UTEXT32 card for KX-UT series SIP Phone registration.

* Note) This procedure differs according to the IP Terminal Registration Mode already set to your KX-NS1000.For details about how to configure the V-UTEXT32 card in each mode, refer to "Installation Manual 5.9.1 Registering IP Telephones".

5.1-1 Click on [PBX Configuration] --> [1.Configuration] --> [1.Slot] --> [V-UTEXT32]

Users	Slot										
S PBX Configuration	Select Shelf :	Physical	Virtual	Legac	y-GW1	Leg	acy-GV/2

5.1-6 Click on [Apply] and [OK]

OK Cancel	Apply
-----------	-------

- 5.1-7 Reboot UT-Phone by "**Power reset or RESET command**" with UT- Phone manually. The UT-SIP Phone will download Remote site settings automatically.
- 5.1-8 Please wait until UT-SIP Phone is received the Remote Extension configuration.

The UT-SIP Phone will download the Remote Configuration parameters.

The UT-SIP Phone will be shown on display as following message.

ſ	Connection error (90002)	
	Check server and set it.	

* Note)

Depending on the model of the existing Router, you may be able to connect to the PBX.

5.1-9 After confirming remote connection to the PBX, re-pack the KX-UT series SIP Phone, and then send it to the remote site. The UT-SIP Phone completed the settings.

Note:

When the KX-UT series SIP Phone is connected at the remote site, it should start normally. If the KX-UT series SIP Phone cannot connect normally, import the configuration file of "UT_ACS_HTTPS_01NS1000.cfg or UT_ACS_NS1000.cfg" again as with "Procedure for method 2" using the Web user interface after initialize.

5.1-10 Unpack the UT-SIP Phone and connect it to the LAN.

The UT-SIP Phone will connect to the Head office PBX via SBC. And, the UT-SIP Phone will be shown as following on display (Example).

> 9 OCT 12:00 TUE 301

5.1-11 Please check the Basic outgoing and incoming calls.

5.2 Procedure for Method 2 with KX-UT Series SIP Phones.

* Note)

Configure the SIP Phone remote settings using the Web user interface of the SIP Phone.

You do not have to connect the SIP Phone to the PBX when using this method.

5.2-1 Click on [PBX Configuration] --> [1.Configuration] --> [V-UTEXT32]

5.2-23 Register the UT-SIP Phone (V-UTEXT32) by NS1000 registration.

5.3 Registering IP Telephones

After the programming of the PBX and IP telephones is finished

(refer to "5.8 Assigning Networking Information to IP Telephones" in the Installation Manual), the IP telephones must be registered to the PBX.

The procedure for registering IP telephones differs according to the IP terminal registration mode specified during the Easy Setup Wizard. This setting can also be changed in the Site Property - Main screen of the Web Maintenance Console (refer to "9.5.1 PBX Configuration - [1-1] Configuration - Slot - Site Property - Main - Main - IP Terminal Registration Mode" in the PC Programming Manual). Refer to the following table:

	1.Full Automatic mode	2. Extension Input mode	3. Manual Mode

5.4 Full Automatic Mode

If networking settings have been completed, when IP-PTs or KX-UT series SIP Phones are connected to the same network as the PBX, they will be registered automatically. No registration procedure is required.

5.5 Extension Number Input Mode

For KX-UT Series SIP Phones

If networking settings have been completed, when KX-UT series SIP Phones are connected to the same network as the PBX, they will be registered automatically as same as when they are registered in Full Automatic mode. No registration procedure is required.

*Note)

UT series do not support "Extension Input Mode", so even if you set registration mode to "Extension Input Mode", the way of registration is same as "Full Automatic Mode". Please refer "Full Automatic" explanation.

7. Operation

Try the basic calls.

We confirm the following operation by settings in this Reference Guide.

7-1 Incoming Call and making Call

The Caller ID is displayed on the LCD screen of Panasonic UT-SIP Extension and SIP Extension.

7-2 Conversation with G.722 G.711 and G.729

The more than single codec is already set in KX-NS1000 (V-SIPEXT)

7-3 Holding Call and retrieving Call held

These features are confirmed by KX-NS1000 control.

7-4 Transferring Call

The transferring Calls are confirmed by KX-NS1000 control.

7-5 Call forwarding (V-UTEXT32 Registered)

These features are confirmed by KX-NS1000 control.

* Note* This feature does not work as using registration of SIP extension (V-SIPEXT32).

Restriction on the use of standard SIP Extension (V-SIPEXT32).

8. How to register 3rd party SIP Phones

Procedure for Installing Remote SIP Phone (Remote V-SIPEXT32) if required.

This PBX supports the use of 3rd party SIP Phones connected from a remote office over an IP network through an SBC.

SIP Phones can be set up by simply connecting the Phones to the LAN at the remote office. If the customer has needs, we can register the 3rd party SIP Phones.

For example, the Media5fone. They have to set a registration method of V-SIPEXT.

8.1 How to make the new SIP Extension (Example)

8.1-1 Configuration of the SIP Extension into the IP-PBX.

The PBX preparation completed.

<u>9. Configure the Remote Office SIP Extension Settings if required only (Example).</u> (Here is described as sample for Panasonic KX-UT SIP Phone(KX-UT123)).

We have to configure the SIP terminal via web in case using registration of V-SIPEXT (SIP-SLT) Connect the SIP-terminal to the LAN. The following explanation assumes the LAN supports DHCP. (e.g. DHCP server has given the SIP terminal the address 192.168.10.1).

9.1 Login and confirmation of info.

- 9.1-1 On the telephone, press [Setting or Setup] --> Select the [Network Settings] --> Press [Enter]
 - --> Select the [Embedded web] --> Press [ENTER] --> Select [ON] --> Press [ENTER]
 - --> [Back] --> [Back]. Or press [Setting or Setup] [#],[5],[3],[4] Select [On] Press [Enter]
- 9.1-2 Confirmation of current IP Address.

Panasonic

On the telephone, press [Setting or Setup] --> Select the [Information Display]

--> Press [ENTER] --> Select the [IP Address] confirmation IP Address 192.168.10.1 (Example)

9.1-3 Access the SIP Terminal's web page (using previously read IP address).

```
e.g. http://192.168.10.1/ User Name: admin / Password: adminpass --> Click on [OK]
```

Enter Ne	twork Passw	ord	
۴	This secure W Please type th Authorization.	'eb Site (at 192.168.0.1) red e User Name and Password	quires you to log on. d that you use for
	<u>U</u> ser Name	admin	•
	<u>P</u> assword	******	
	🔲 <u>S</u> ave this	password in your password	list
			OK Cancel

9.1-4 Confirmation of **Version Information**: In this case, 01.160 (Operating Bank: Bank1) (Software version must be at or later than the version shown)

10. Further SBC Information and Configuration

All documents are available online on the Mediatrix Download Portal at

https://support.mediatrix.com/DownloadPlus/Download.asp.

Or on the web site at the following link

http://www.mediatrix.com/en/sessionbordercontroller Under the documentation tab.

11. Management

11.1 Reset SBC to Factory Defaults

If you wish to you can reset all settings to their original values, so your Mediatrix 500 Series unit is setup the same way as when delivered from the factory.

- 1. Press and hold [SET] (1) pressed for 3 seconds, to enter setup mode.
- 2. Press [SEL] (2) repeatedly until "RST" appears in the display.
- 3. Press [SET](1).
- 4. The question "Clear all?" appears, and then "no".
- 5. Press [SEL](2) to choose "YES".
- 6. Press [SET](1).

11.2 Time Setting

Time setting will be useful for analyzing some kind of problems.

11.2-1 Move the mouse [Configurations] --> [Administration] --> in the Time section.

11.2-2 Configure the Time Server IP address, this IP is PBX IP address.(Example)

Time			?
Time zone:	Universal (Coordinated) (+0h)	~	
SNTP server:	192.168.0.101		

11.3 SBC Configuration Backup

11.3-1 Move Mouse over [Configurations] and Select [Administration].

11.3-2 Enter the Password: 123456 and then Click on [Backup to file]. Example

Aummisu auon 🛛 🔍 🤨	Ad	lmin	istratio	n 📀	?

12 Troubleshooting

12.1 REGISTER Flood Attack

The Figure below shows a REGISTER Flood attack example.

The attack begins with OPTIONS message. Then, the attacker sends a great many REGISTER

messages. The source address changes irregularly.

The symptom of this type of attack is the PBX temporarily becomes un-responsive,

(It is very busy sending "404 Not Found" messages until the attacks over).

Countermeasure:

In the Switch Advanced, Configure a new entry in the Incoming Call Blacklist from captured packets.

12.1-1 Move mouse over Applications in SIP Advanced.

12.1-2 Configure a new entry in the Incoming Call Blacklist from captured packets.

User-Agent=*Attacker* (Example)

Incoming Call Blacklist	•
User-Agent=*friendly-scanner*	These are default setting value.
User-Agent=*sundayddr*	
User-Agent=*Attacker*	Enter the new entry in Blacklist
User-Agent=*Attacker*	Enter the new entry in Blacklist

12.1-3 Click on [Click here to save permanently]

Home	Configurations	Applications	Status	Logs	Help
\Lambda Cha	inges made!	Click here to sa	ve permar	hently	(Reboot the unit to cancel changes)

12.2 When UT-SIP Phone is repeated a reboot at remote site.

See section 5

- 1. Check the remote connection protocol whether it match or not.
- 2. Check the selected Phone location whether it match or not.

13. Appendix

13.1 SBC Configuration Check Sheet (PPPoE and Global IP address directly) (1/2)
